Excerpt:

A complex 40+ piece build for a Ducati 1199 Superbike designed specifically for FDM printing.

## Description:

**Ducati 1199 Superbike (COMPLEX)**  
*Intermediate-advance modellers recommended* ... for now.  
\*Model refinements and detailed instructions coming soon for beginner/intermediate modellers.\*  
This is a 40+ part build designed specifically for FDM printers like the Ultimaker. This example was printed on an ultimaker original at varying resolutions from 0.1mm / layer to 0.15mm / layer. Painted in Enamels, acrylics and lacquers.  
-Some fitting and filing may be required.  
-Superglue is required for a tight fit, but everything has a peg/slot to assist in assembly and alignment.  
-front Steering works, rear wheels do not turn if chain is present. (for obvious reasons)  
-Requires rear stand to be free standing.  
**You will need**  
standard file set  
Super glue  
exacto knife  
Start with the Body + engine block and build outwards.  
print body at lower layer height one at a time for smoother outer finish.  
More info on the bike on the Ultimaker blog: <https://www.ultimaker.com/blogs/news/2014/09/03/3d-printed-ducati-1199-superbike>  
Look for an upcoming guide to printing & assembly!

If you can, please use the online documentation found at <http://www.youmagine.com/designs/ducati-1199-superbike-complex> because those may have been updated. Also, there you can interact and provide praise and/or feedback.
